Education

Singapore University of Technology and Design (SUTD) Bachelor of Engineering in Computer Science	Singapore April 2025
Reykjavik University Full-time exchange student	Reykjavik, Iceland Spring 2024
Stanford University Full-time exchange student	Palo Alto, CA Summer 2022

Experience

Hewlett Packard Inc. <i>Automation Software Developer Intern</i>	Singapore September 2023 - December 2023
- Developed end-to-end software solutions such as Image to Text record-retention application using Tesseract Optical Character Recognition as well as Regulatory Web Documentation using Ruby and Sass Framework. - Developed a live language translation tool powered by AI for meetings with global stakeholders by bench-marking different models such as WhisperAI, Helsinki, Mistral-OpenOrca and seamlessM4T.	
Singapore University of Technology and Design <i>Undergraduate AI Researcher</i>	Singapore August 2023 - March 2024
- Worked closely together with a team of 5 researchers to understand the impact of Large Language Models (LLMs) and their effectiveness on student's learning. - Analyzed and generated insights from qualitative data that has shown various student behaviors and habits when using GPT for their learning.	
Pratt & Whitney <i>Extended Reality Software Developer</i>	Singapore September 2018 - February 2019
- Pioneered and developed an Extended Reality Operational Training Software via an experiential instruction manual using Unity and C# Programming. - Saved up to 16 training hours, amounting to 220 turbine blades worth of earnings, for every 2 new technicians.	

Project

Finance Automation <i>Software Development</i>	SUTD June 2023 - August 2023
- Led, designed and developed an end-to-end software solution that automates the translation of Receipt-To-Text using Optical Character Recognition Technology (Tesseract) - Automated transfers of stored receipt details to SUTD SAP Concur Financial System by making use of authorized browser Cookie sessions and HTTP Messages. - Designed and implemented a database that integrates with the native OS file system implemented with C# with .NET MAUI framework.	
Custom CPU Arcade <i>ISA Architecture / Assembly Language Development</i>	SUTD January 2023 - April 2023
- Designed an CPU with its own instruction set that is assembled in lucid on an Alchitry FPGA. - Developed an emulator in python that emulates the above CPU. - Scripted in Assembly Language a version of Othello using a custom-designed Computing Architecture.	

Skills

Technical Languages	Python, C#, Java, Javascript, SQL, GO, Rust, C, C++
Systems and Frameworks	.NET Core, Moq, Git, Linux, React Unity, FPGA, Lucid HDL
